Misc

Description:

1. C or VB code to convert Mobius .daf image files to .tif on 8 bit boundary with 16 tag (very minimal) header. 2. C or VB code to convert Mobius .daf print files to standard .PCL or PDF. The Mobius image files do contain tiff headers and are almost viewable but very distorted. Will need to remap tiff header. The Mobius Report files contain some pcl code but it uses some flakey esc codes etc. Need to be able to convert this to std PCL.

To open the grayscale image you should be able to rename it to .tif and open it with any tif viewer. If that doesn't work strip off the bytes preceding the hex49 beginning tif header. The mapping data has been moved around so something like gnu tifflib might be used to map to and from. Use what you like. I need the conversion tool to make it clearly viewable with any std tif viewer.

For the txtfile again the correct viewer is again the mobius viewer (proprietary) but again we have a case where a std file type has been altered (slightly). Any pclviewer should get you part way there.
www.redtitan.com or www.pcltools.com could allow you to download a pcl

viewer.

I might also suggest as a shortcut any pcl print drivers and tif print drivers that you can access source to and modify to do the conversion.

We need to be able to do multiple page images as well. If you are confident about the single page versions then contact me for larger multi page samples.

Thanks
Myron

Platform:

Must run on Windows xp.

Additional Files:

This bid request includes IMPORTANT additional attached files. Please download and read fully before bidding.

Deliverables:

C or VB source code and programs to convert Mobius .daf files to Tif or PCL depending on image type.

Dave

From: Dave [davew@realvisionsoftware.com]
Sent: Thursday, July 21, 2005 9:17 AM
To: Randy Lipsitz (rlipsitz@kramerlevin.com)
Subject: RVI

Randy

Attached is the letter you requested.

I will be in the office today and tomorrow and available to talk with the people at Mobius.

We are Central time here so let me a know a good time for them and I will make myself available.

Thanks

David H. Woodring, RVI
318-449-4579
davew@realvisionsoftware.com

July 21, 2005

Mr. Randy Lipsitz
Kramer Levin Naftalis & Frankel
1177 Avenue of the Americas
New York, NY 10036

Dear Mr. Lipsitz:

As an update on our conversation, I want to respond to the questions you had concerning the Mobius conversion that was provided for Daksoft, part of the Black Hills Corporation.

Daksoft is an RVI customer and they wanted us to help them convert their old images, their data, from a system they were no longer using, to the RVI System.

Myron Rogers, who at that time was a contract programmer not an RVI employee, worked on the converting the images to be viewable in the RVI System. At no time were any Mobius programs used or reengineered, he merely worked with the Daksoft's images and spool files.

RVI is an imaging system for IBM's AS/400 and from time to time we are asked by our customers to assist them in converting off an older imaging systems to ours. We are not a conversion company that is in the market soliciting conversion work, we only work with our existing customers. To my knowledge this is the first time since 1992 that we have we have encountered the Mobius System and I do not see it as a frequent event.

Just as with our system, the images are the property of the customer to do with as they please, they do not belong to us. Should they decide to move to another system, and we hope they don't, they are free to have anyone they choose convert the data.

We have had some RVI customers convert from our system to other systems or platforms and as we see it, that is a common event in the industry. There are numerous conversion companies nationwide that routinely deal in this business full time but we are not one.

I hope I have an opportunity speak to a representative at Mobius in an effort to hopefully resolve this in an amicable way and to assure them we have used any of their programs or reengineered programs in the conversion effort.

I appreciate your time and look forward to a satisfactory resolution to this matter.

Sincerely,
David H. Woodring
David H. Woodring
Vice President

Memo

To: Jonathan Wagner
From: Anton Hopen
Date: 6/17/2005 @ 10:48 AM
Our Ref: 1203.11
Re: Mobius – Acartus

Dear Jonathan:

When we last spoke on Wednesday you anticipated meeting with your client that afternoon. I presume the proposed modifications to the Acartus product literature are acceptable and allay the concerns you had regarding proper trademark usage.

You also requested information relating to access to the Mobius DAF file format. Our client has relayed the following:

1. Acartus reverse engineered the DAF file format in a clean room environment without access to Mobius software, documentation or source code.
2. Acartus does not employ any technical staff formerly employed by or affiliated with Mobius in any way.
3. The only former Mobius employees that Acartus employs are sales people who presumably did not have access to Mobius source code, and in any case were in no way involved with the development of the DAF export utility.
4. The DAF file format is a well known MIME type published throughout the Internet.
5. The ViewDirect/DocumentDirect user guide is published on the Internet and DAF files are available through publicly accessible downloads.

If desired, I can have an affidavit to the above-mentioned facts executed by an officer of Acartus.

We have: (1) taken offline the publication forming the basis for the trademark counts; (2) provided a proposed replacement; and (3) relayed that no confidential data was accessed by our client.

In view of the above, please allow us a one month extension to file an Answer with the intention that we close this matter prior to July 21, 2005. If this is acceptable, please let us know.

Best regards,

Anton
